tēmi - Android Developer Exercise

Task description

- Create a mobile app that loads and display a contacts list with specific details of the contacts (See attached mockup A)
- Sort the list by date
- Allow the user to tap a contact and display the contact details view with the contact's details as described in the mockup (B)
- In details view allow the user to tap the "Call" button and send a simple message to a recipient on a different device - (Please use https://www.pubnub.com/ or any other Publish-Subscribe service)
- On the recipient device display the notification

Guidelines

- Support portrait mode only
- Try to achieve the exact UI that is in the mockup
- Consider multiple screen sizes
- Consider best UX:
  - Loading spinners
  - Page transitions
  - Pull to refresh

Comments:

- We assume this exercise should take about 6-8 hours
- Feel free to contact us with any questions
- Feel free to use any 3rd party library but make sure the core code is yours
  ## Contacts JSON:
